

## Installing a root certificate on a Mac

1. Download the three certificate files and then open **Keychain Access** by searching it on Spotlight (*clicking the Magnifying glass located on the upper right corner*).

2. Select **File > Import Items**. Navigate to the file downloaded. Select **System** as "Destination Keychain".

3. Enter password when prompted.
4. Logoff to take effect.
5. On some Mac OS version you also need to do the following:
  - Right click on the certificate in Keychain Access and select **Get Info**
  - Expand the **Trust** section
  - Under **When using this certificate** select **Always Trust**.
